Document format service

This example imports a document once and produces reusable exports and previews through the maintained service.

Supported content

A paragraph preserves **bold text**, *italic text*, inline code and a reference link.

1. Import a source document
   - Retain its original bytes
   - Catalog its supported content
2. Apply an ordered transformation
3. Obtain exports and a visual preview

Content	Service behavior
Headings and text	Preserve structure and supported formatting
Tables and images	Retain ordered cells and original image bytes
Unsupported features	Report conversion losses before acceptance

import -> inspect -> transform -> render -> export
